## Element program / title

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>						
Annotations	A short title of the program.						
Diagram	<pre> classDiagram     class title {         titleString     }     title "0..1" -- "1..1" titleString     note over titleString: A short title of the program.     note over titleString: The length of the title is constraint in length. </pre>						
Type	titleString						
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> </table>	content:	simple	minOccurs:	0	maxOccurs:	1
content:	simple						
minOccurs:	0						
maxOccurs:	1						
Facets	maxLength 60						
Source	<pre> &lt;xs:element name="title" type="titleString" minOccurs="0" maxOccurs="1"&gt;     &lt;xs:annotation&gt;         &lt;xs:documentation&gt;A short title of the program.&lt;/xs:documentation&gt;     &lt;/xs:annotation&gt; &lt;/xs:element&gt; </pre>						

## Element program / author

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>
Annotations	Each program can have one or more authors.

Diagram	A UML class diagram representing the 'author' element. It has three attributes: 'firstName' (xs:string), 'lastName' (xs:string), and 'email' (emailAddress). A note states: 'Each program can have one or more authors.' A note for 'firstName' says: 'The first name of the author. Can contain middle names if necessary.' A note for 'email' says: '(The email address of the author (optional).)'.
Properties	<p>content: complex</p> <p>minOccurs: 0</p> <p>maxOccurs: unbounded</p>
Model	firstName , lastName , email{0,1}
Children	email, firstName, lastName
Instance	<pre>&lt;author xmlns="https://github.com/bartneck/swiML"&gt;   &lt;firstName&gt;{1,1}&lt;/firstName&gt;   &lt;lastName&gt;{1,1}&lt;/lastName&gt;   &lt;email&gt;{0,1}&lt;/email&gt; &lt;/author&gt;</pre>
Source	<pre>&lt;xs:element maxOccurs="unbounded" minOccurs="0" name="author"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Each program can have one or more authors.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:complexType&gt;     &lt;xs:sequence&gt;       &lt;xs:element name="firstName" minOccurs="1" type="xs:string"&gt;         &lt;xs:annotation&gt;           &lt;xs:documentation&gt;The first name of the author. Can contain middle names if necessary.&lt;/xs:documentation&gt;         &lt;/xs:annotation&gt;       &lt;/xs:element&gt;       &lt;xs:element name="lastName" minOccurs="1" type="xs:string"&gt;         &lt;xs:annotation&gt;           &lt;xs:documentation&gt;The last name of the author.&lt;/xs:documentation&gt;         &lt;/xs:annotation&gt;       &lt;/xs:element&gt;       &lt;xs:element minOccurs="0" name="email" type="emailAddress"&gt;         &lt;xs:annotation&gt;           &lt;xs:documentation&gt;The email address of the author (optional).&lt;/xs:documentation&gt;         &lt;/xs:annotation&gt;       &lt;/xs:element&gt;     &lt;/xs:sequence&gt;   &lt;/xs:complexType&gt; &lt;/xs:element&gt;</pre>

## Element program / author / firstName

Namespace	https://github.com/bartneck/swiML
Annotations	The first name of the author. Can contain middle names if necessary.
Diagram	A UML class diagram showing the 'firstName' attribute with type 'xs:string'. A note says: 'The first name of the author. Can contain middle names if necessary.' Another note says: 'Built-in primitive type. The string datatype represents character strings in XML.'
Type	xs:string
Properties	<p>content: simple</p> <p>minOccurs: 1</p>
Source	<pre>&lt;xs:element name="firstName" minOccurs="1" type="xs:string"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The first name of the author. Can contain middle names if necessary.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

**Element program / author / lastName**

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>				
Annotations	The last name of the author.				
Diagram	<pre> graph LR     lastName[lastName Type xs:string] --&gt; xsString[xs:string]     subgraph Callout         direction TB         C1["The last name of the author."]         C2["Built-in primitive type. The string datatype represents character strings in XML."]         C1 --- C2     end   </pre>				
Type	xs:string				
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>1</td> </tr> </table>	content:	simple	minOccurs:	1
content:	simple				
minOccurs:	1				
Source	<pre> &lt;xs:element name="lastName" minOccurs="1" type="xs:string"&gt;     &lt;xs:annotation&gt;         &lt;xs:documentation&gt;The last name of the author.&lt;/xs:documentation&gt;     &lt;/xs:annotation&gt; &lt;/xs:element&gt;   </pre>				

**Element program / author / email**

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>				
Annotations	The email address of the author (optional).				
Diagram	<pre> graph LR     email[email Type emailAddress] --&gt; emailAddress[emailAddress]     subgraph Callout         direction TB         C1["The email address of the author (optional)."]         C2["The pattern checks for valid email addresses."]         C1 --- C2     end   </pre>				
Type	emailAddress				
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> </table>	content:	simple	minOccurs:	0
content:	simple				
minOccurs:	0				
Facets	pattern [^@]+@[^\.\.]+\...+				
Source	<pre> &lt;xs:element minOccurs="0" name="email" type="emailAddress"&gt;     &lt;xs:annotation&gt;         &lt;xs:documentation&gt;The email address of the author (optional).&lt;/xs:documentation&gt;     &lt;/xs:annotation&gt; &lt;/xs:element&gt;   </pre>				

**Element program / programDescription**

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>						
Annotations	A short description for the program.						
Diagram	<pre> graph LR     programDescription[programDescription Type descriptionString] --&gt; descriptionString[descriptionString]     subgraph Callout         direction TB         C1["A short description for the program."]         C2["The length of the description text is constraint in length."]         C1 --- C2     end   </pre>						
Type	descriptionString						
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> </table>	content:	simple	minOccurs:	0	maxOccurs:	1
content:	simple

**Element program / creationDate**

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>
-----------	---

Annotations	The date on which the program was created.
Diagram	<pre> creationDate Type xs:date Default 2022-02-22 The date on which the program was created. xs:date Built-in primitive type. The date datatype represents a calendar date.   </pre>
Type	xs:date
Properties	content: simple minOccurs: 0 maxOccurs: 1 default: 2022-02-22
Source	<pre> &lt;xs:element minOccurs="0" name="creationDate" type="xs:date" maxOccurs="1" default="2022-02-22"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The date on which the program was created.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;   </pre>

## Element program / poolLength

Namespace	https://github.com/bartneck/swiML
Annotations	The length of pool
Diagram	<pre> poolLength Type xs:nonNegativeInteger Default 25 The length of pool xs:nonNegativeInteger Built-in derived type. The nonNegativeInteger datatype is derived from integer by setting the value of minInclusive to...   </pre>
Type	xs:nonNegativeInteger
Properties	content: simple minOccurs: 1 maxOccurs: 1 default: 25
Source	<pre> &lt;xs:element name="poolLength" minOccurs="1" maxOccurs="1" type="xs:nonNegativeInteger" default="25"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The length of pool&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;   </pre>

## Element program / lengthUnit

Namespace	https://github.com/bartneck/swiML
Annotations	The length of pool requires a measurement unit.
Diagram	<pre> lengthUnit Type lengthUnits Default meters The length of pool requires a measurement unit. lengthUnits   </pre> <p>The unit of measurement for the length of the target pool (meter or yards).</p>
Type	lengthUnits
Properties	content: simple minOccurs: 1 maxOccurs: 1 default: meters
Facets	enumeration meters enumeration kilometers enumeration miles

	enumeration	yards
Source	<xs:element name="lengthUnit" minOccurs="1" maxOccurs="1" type="lengthUnits" default="meters"> <xs:annotation> <xs:documentation>The length of pool requires a measurement unit.</xs:documentation> </xs:annotation> </xs:element>	

## Element program / programAlign

Namespace	https://github.com/bartneck/swiML							
Annotations	When set to False all elements in the program will not align							
Diagram								
Type	xs:boolean							
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> </table>		content:	simple	minOccurs:	0	maxOccurs:	1
content:	simple

## Element program / hideIntro

Namespace	https://github.com/bartneck/swiML							
Annotations	True if intro should be hidden in output.							
Diagram								
Type	xs:boolean							
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> </table>		content:	simple	minOccurs:	0	maxOccurs:	1
content:	simple							
minOccurs:	0							
maxOccurs:	1							
Source	<xs:element name="hideIntro" minOccurs="0" maxOccurs="1" type="xs:boolean"> <xs:annotation> <xs:documentation>True if intro should be hidden in output.</xs:documentation> </xs:annotation> </xs:element>							

## Element program / layoutWidth

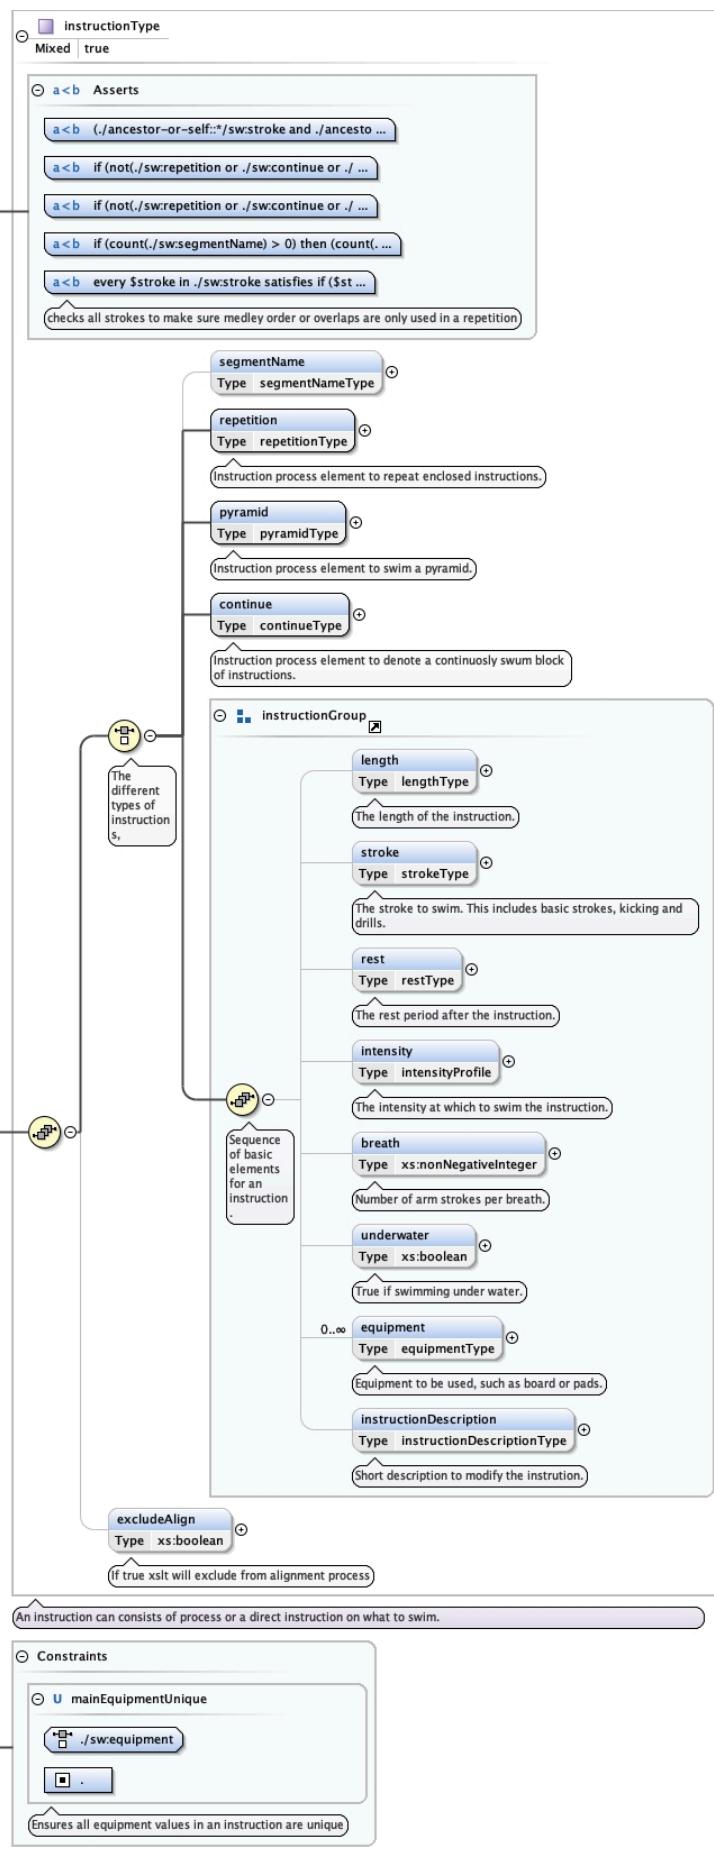

Namespace	https://github.com/bartneck/swiML					
Annotations	The width of the program on the HTML page. The unit is characters. 50ch are 11cm wide.					
Diagram						
Type	xs:nonNegativeInteger					
Properties	<table border="1"> <tr> <td>content:</td> <td>simple</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> </table>		content:	simple	minOccurs:	0
content:	simple					
minOccurs:	0					

	<table border="1"> <tr> <td>maxOccurs:</td><td>1</td></tr> <tr> <td>default:</td><td>50</td></tr> </table>	maxOccurs:	1	default:	50
maxOccurs:	1				
default:	50				
Source	<pre>&lt;xs:element name="layoutWidth" minOccurs="0" maxOccurs="1" type="xs:nonNegativeInteger" default="50"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The width of the program on the HTML page. The unit is characters. 50ch are 11cm wide.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>				

## Element program / instruction

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>
Annotations	The basic elements for programs. Each instruction defines what to swim.

### Element lengthType / lengthAsDistance

Namespace	https://github.com/bartneck/swiML
Annotations	Length of instruction as distance.
Diagram	<pre> classDiagram     lengthAsDistance &lt; --&gt; xs:nonNegativeInteger   </pre> <p>Length of instruction as distance.</p> <p>Built-in derived type. The nonNegativeInteger datatype is derived from integer by setting the value of minInclusive to...</p>
Type	xs:nonNegativeInteger
Properties	content: simple
Source	<pre> &lt;xs:element name="lengthAsDistance" type="xs:nonNegativeInteger"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Length of instruction as distance.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;   </pre>

### Element lengthType / lengthAsTime

Namespace	https://github.com/bartneck/swiML
Annotations	Duration starts with PT followed by int M and int S. For example PT1M30S for 1:30.
Diagram	<pre> classDiagram     lengthAsTime &lt; --&gt; xs:duration   </pre> <p>Duration starts with PT followed by int M and int S. For example PT1M30S for 1:30.</p> <p>Built-in primitive type. The duration datatype represents a duration of time.</p>

Type	xs:duration
Properties	content: simple
Source	<pre>&lt;xs:element name="lengthAsTime" type="xs:duration"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Duration starts with PT followed by int M and int S. For example PT1M30S for 1:30.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

### Element lengthType / lengthAsLaps

Namespace	https://github.com/bartneck/swiML
Annotations	Length of instruction in number of laps.
Diagram	<p>The diagram shows a class named 'lengthAsLaps' with a constraint 'Type xs:nonNegativeInteger'. A directed association line connects it to another class 'xs:nonNegativeInteger' with a multiplicity of 0..1 at the source end. A callout box indicates that 'lengthAsLaps' is a 'Built-in derived type. The nonNegativeInteger datatype is derived from integer by setting the value of minInclusive to...'.</p>
Type	xs:nonNegativeInteger
Properties	content: simple
Source	<pre>&lt;xs:element name="lengthAsLaps" type="xs:nonNegativeInteger"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Length of instruction in number of laps.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

### Element instructionGroup / stroke

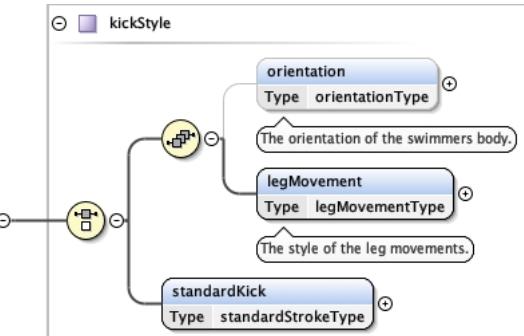

Namespace	https://github.com/bartneck/swiML
Annotations	The stroke to swim. This includes basic strokes, kicking and drills.
Diagram	<p>The diagram shows a class named 'strokeType' with a constraint 'Mixed   true'. It has three subclasses: 'standardStroke' (Type standardStrokeType), 'kicking' (Type kickStyle), and 'drill' (Type drillType). A callout box indicates that 'strokeType' is a 'Stroke types.'</p>
Type	strokeType
Properties	<p>content: complex minOccurs: 0 maxOccurs: 1 mixed: true</p>
Model	standardStroke   kicking   drill
Children	drill, kicking, standardStroke
Instance	<pre>&lt;stroke xmlns="https://github.com/bartneck/swiML"&gt;   &lt;standardStroke&gt;{1,1}&lt;/standardStroke&gt;   &lt;kicking&gt;{1,1}&lt;/kicking&gt;   &lt;drill&gt;{1,1}&lt;/drill&gt; &lt;/stroke&gt;</pre>

## Element restType / afterStop

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>
Annotations	Duration of rest after stopping a swimming instruction. Example: 20 seconds means that the swimmer will rest for 20 seconds after stopping the current instructions.
Diagram	<p>The diagram shows the <code>afterStop</code> attribute of the <code>restType</code> element. It is of type <code>xs:duration</code>. A note indicates: Duration of rest after stopping a swimming instruction. Example: 20 seconds means that the swimmer will rest for 20... Another note states: Built-in primitive type. The duration datatype represents a duration of time.</p>

Type	xs:duration
Properties	content: simple
Source	<pre>&lt;xs:element name="afterStop" type="xs:duration"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Duration of rest after stopping a swimming instruction. Example: 20 seconds means that the swimmer will rest for 20 seconds after stopping the current instructions.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element restType / sinceStart

Namespace	https://github.com/bartneck/swiML
Annotations	The interval on which swimming instructions start. Example: on 1:30 means that the next instructions starts after 1:30 from starting the current instruction.
Diagram	
Type	xs:duration
Properties	content: simple
Source	<pre>&lt;xs:element name="sinceStart" type="xs:duration"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The interval on which swimming instructions start. Example: on 1:30 means that the next instructions starts after 1:30 from starting the current instruction.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element restType / sinceLastRest

Namespace	https://github.com/bartneck/swiML
Annotations	The time since the end of the last rest. This is useful when several instructions without a rest period are swum, followed by a since start type rest.
Diagram	
Type	xs:duration
Properties	content: simple
Source	<pre>&lt;xs:element name="sinceLastRest" type="xs:duration"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The time since the end of the last rest. This is useful when several instructions without a rest period are swum, followed by a since start type rest.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element restType / inout

Namespace	https://github.com/bartneck/swiML
Annotations	Number of swimmers arriving. Example: 3rd in: Once the 3rd swimmer in the lane arrives, the 1st swimmer starts.
Diagram	
Type	xs:nonNegativeInteger

Properties	content: simple
Source	<pre>&lt;xs:element name="inOut" type="xs:nonNegativeInteger"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Number of swimmers arriving. Example: 3rd in: Once the 3rd swimmer in the lane arrives, the 1st swimmer starts.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element instructionGroup / intensity

Namespace	https://github.com/bartneck/swiML								
Annotations	The intensity at which to swim the instruction.								
Diagram	<pre> classDiagram     class intensityProfile {         startIntensity : intensityType         stopIntensity : intensityType     }     intensityProfile &lt; -- intensity     intensity &lt; -- intensityProfile   </pre> <p>The diagram shows the <code>intensityProfile</code> element as a class with two attributes: <code>startIntensity</code> and <code>stopIntensity</code>. Both attributes are of type <code>intensityType</code>. A note below the <code>intensityProfile</code> class states: "The intensity of the instruction. When given at the lowest level just start intensity indicates a constant intensity if..."</p>								
Type	intensityProfile								
Properties	<table border="1"> <tr> <td>content:</td> <td>complex</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> <tr> <td>mixed:</td> <td>true</td> </tr> </table>	content:	complex	minOccurs:	0	maxOccurs:	1	mixed:	true
content:	complex								
minOccurs:	0								
maxOccurs:	1

## Element pyramidType / startLength

Namespace	https://github.com/bartneck/swiML								
Annotations	The start length of the pyramid.								
Diagram	<p>The diagram illustrates the UML class <code>lengthType</code>. It is defined as a <code>Mixed</code> element with <code>true</code> as its value. The class has three associations: <code>startLength</code> (Type <code>lengthType</code>) pointing to <code>lengthAsDistance</code>, <code>lengthAsTime</code>, and <code>lengthAsLaps</code>. Each association is annotated with a tooltip: <code>lengthAsDistance</code> (Type <code>xs:nonNegativeInteger</code>) is described as "Length of instruction as distance.", <code>lengthAsTime</code> (Type <code>xs:duration</code>) is described as "Duration starts with PT followed by int M and int S. For example PT1M30S for 1:30.", and <code>lengthAsLaps</code> (Type <code>xs:nonNegativeInteger</code>) is described as "Length of instruction in number of laps.". A general note at the bottom states "The length for a swimming instruction."</p>								
Type	<code>lengthType</code>								
Properties	<table border="1"> <tr> <td>content:</td> <td>complex</td> </tr> <tr> <td>minOccurs:</td> <td>1</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> <tr> <td>mixed:</td> <td>true</td> </tr> </table>	content:	complex	minOccurs:	1	maxOccurs:	1	mixed:	true

## Element pyramidType / isPointy

Namespace	https://github.com/bartneck/swiML
Annotations	A pointy pyramid swims the stop length only once. A non-pointy pyramid swims the stop length twice.
Diagram	
Type	xs:boolean
Properties	content: simple minOccurs: 1 maxOccurs: 1
Source	<pre>&lt;xs:element name="isPointy" minOccurs="1" maxOccurs="1" type="xs:boolean"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;A pointy pyramid swims the stop length only once. A non-pointy pyramid swims the stop length twice.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element instructionType / continue

Namespace	https://github.com/bartneck/swiML
Annotations	Instruction process element to denote a continuosly swum block of instructions.

## Diagram

Type	continueType
Properties	content: complex
Model	continueLength{0,1} , length{0,1} , stroke{0,1} , rest{0,1} , intensity{0,1} , breath{0,1} , underwater{0,1} , equipment* , instructionDescription{0,1} , instruction+
Children	breath, continueLength, equipment, instruction, instructionDescription, intensity, length, rest, stroke, underwater
Instance	<pre>&lt;continue xmlns="https://github.com/bartneck/swiML"&gt;   &lt;continueLength&gt;{0,1}&lt;/continueLength&gt;   &lt;length&gt;{0,1}&lt;/length&gt;   &lt;stroke&gt;{0,1}&lt;/stroke&gt;   &lt;rest&gt;{0,1}&lt;/rest&gt;   &lt;intensity&gt;{0,1}&lt;/intensity&gt;   &lt;breath&gt;{0,1}&lt;/breath&gt;   &lt;underwater&gt;{0,1}&lt;/underwater&gt;   &lt;equipment&gt;{0,unbounded}&lt;/equipment&gt;   &lt;instructionDescription&gt;{0,1}&lt;/instructionDescription&gt;   &lt;instruction&gt;{1,unbounded}&lt;/instruction&gt; &lt;/continue&gt;</pre>

Asserts	<p><b>Test</b></p> <pre>(count(..//sw:instruction/sw:rest) = 0)</pre> <p>ensures no rest tags occur within the instructions of a continue only at top level</p>	<b>XPath default namespace</b>
Source	<pre>&lt;xs:element name="continue" type="continueType"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;Instruction process element to denote a continuosly swim block of instructions.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>	

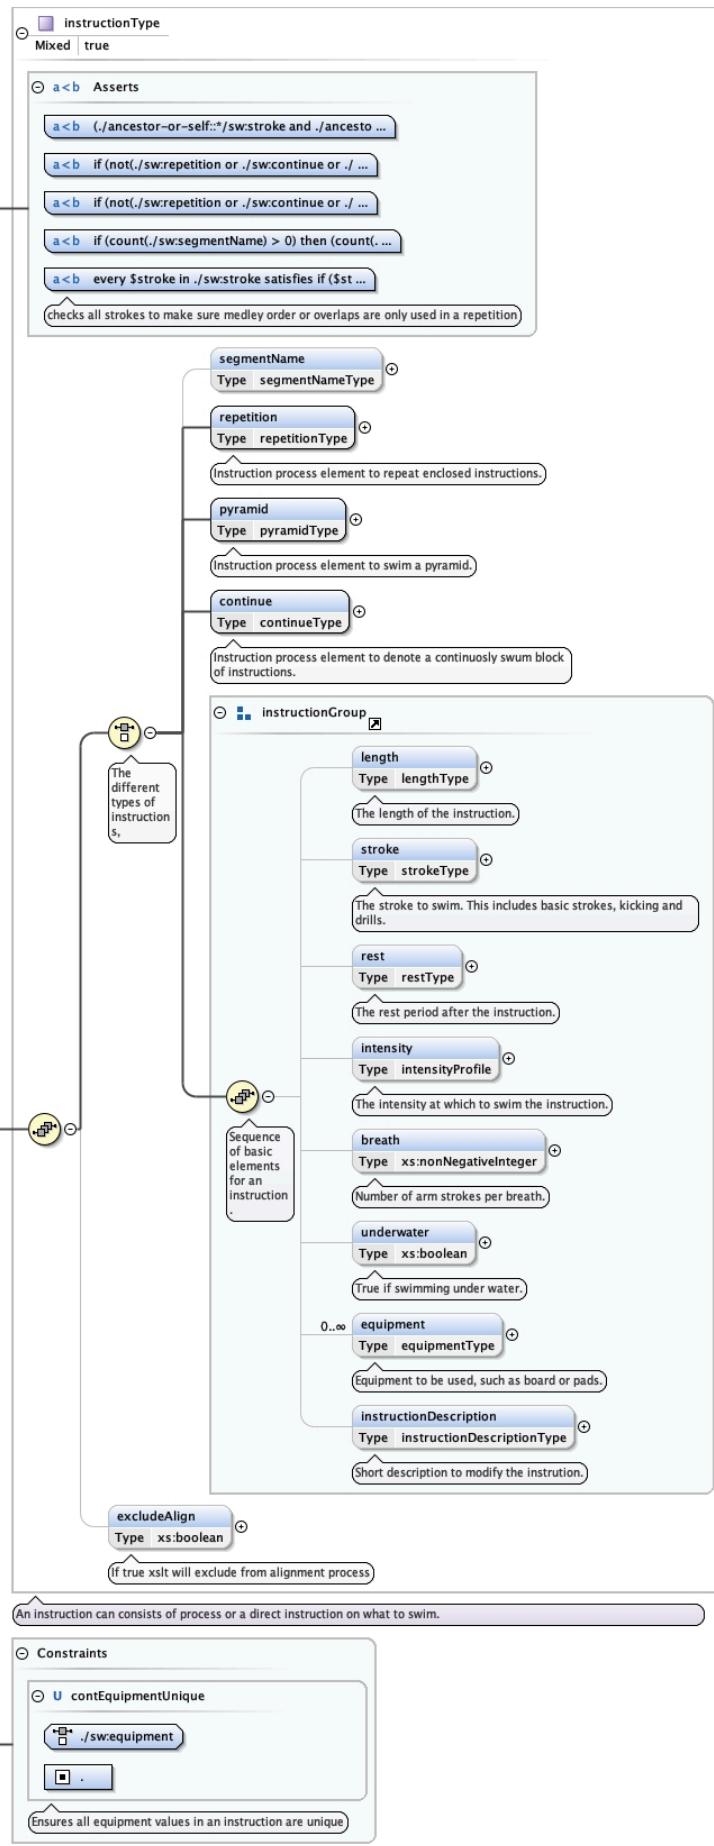

## Element continueType / continueLength

Namespace	https://github.com/bartneck/swiML								
Annotations	total length to swim continuously or total number of repetitions May or may not be defined but if not it will automatically calculated from given instructions								
Diagram	<p>The diagram illustrates the structure of the <code>continueLength</code> element. It is defined as a <code>Mixed</code> type (<code>lengthType</code>). The element can have three possible values:</p> <ul style="list-style-type: none"> <li><code>lengthAsDistance</code>: Type <code>xs:nonNegativeInteger</code>. Description: Length of instruction as distance.</li> <li><code>lengthAsTime</code>: Type <code>xs:duration</code>. Description: Duration starts with PT followed by int M and int S. For example PT1M30S for 1:30.</li> <li><code>lengthAsLaps</code>: Type <code>xs:nonNegativeInteger</code>. Description: Length of instruction in number of laps.</li> </ul> <p>A note states: "Length can be described as distance or time." A larger note at the bottom says: "The length for a swimming instruction."</p>								
Type	<code>lengthType</code>								
Properties	<table border="1"> <tr> <td>content:</td> <td>complex</td> </tr> <tr> <td>minOccurs:</td> <td>0</td> </tr> <tr> <td>maxOccurs:</td> <td>1</td> </tr> <tr> <td>mixed:</td> <td>true</td> </tr> </table>	content:	complex	minOccurs:	0	maxOccurs:	1	mixed:	true
content:	complex								
minOccurs:	0								
maxOccurs:	1								
mixed:	true								
Model	<code>lengthAsDistance   lengthAsTime   lengthAsLaps</code>								
Children	<code>lengthAsDistance, lengthAsLaps, lengthAsTime</code>								
Instance	<pre>&lt;continueLength xmlns="https://github.com/bartneck/swiML"&gt;   &lt;lengthAsDistance&gt;{1,1}&lt;/lengthAsDistance&gt;   &lt;lengthAsTime&gt;{1,1}&lt;/lengthAsTime&gt;   &lt;lengthAsLaps&gt;{1,1}&lt;/lengthAsLaps&gt; &lt;/continueLength&gt;</pre>

## Simple Type(s)

### Simple Type titleString

Namespace	https://github.com/bartneck/swiML
Annotations	The length of the title is constraint in length.
Diagram	<pre> classDiagram     class titleString {         &lt;&lt;restriction of xs:string&gt;&gt;     }     class xs:string     titleString "1" -- "0" xs:string     </pre> <p>The length of the title is constraint in length.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>
Type	restriction of xs:string
Facets	maxLength 60
Used by	Element program/title
Source	<pre> &lt;xs:simpleType name="titleString"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The length of the title is constraint in length.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:restriction base="xs:string"&gt;     &lt;xs:maxLength value="60"/&gt;   &lt;/xs:restriction&gt; &lt;/xs:simpleType&gt; </pre>

### Simple Type emailAddress

Namespace	https://github.com/bartneck/swiML
Annotations	The pattern checks for valid email addresses.
Diagram	<pre> classDiagram     class emailAddress {         &lt;&lt;restriction of xs:string&gt;&gt;     }     class xs:string     emailAddress "1" -- "0" xs:string     </pre> <p>The pattern checks for valid email addresses.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>
Type	restriction of xs:string

Facets	pattern	[ ^@ ]+@[ ^\ . ]+\\ . . +
Used by	Element	program/author/email
Source		<pre>&lt;xs:simpleType name="emailAddress"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The pattern checks for valid email addresses.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:restriction base="xs:string"&gt;     &lt;xs:pattern value="[^@]+@[^\ . ]+\\ . . +"/&gt;   &lt;/xs:restriction&gt; &lt;/xs:simpleType&gt;</pre>

## Simple Type descriptionString

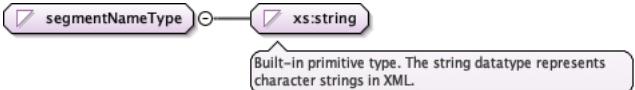

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>	
Annotations	The length of the description text is constraint in length.	
Diagram	<pre> classDiagram     class descriptionString {         &lt;&lt;The length of the description text is constraint in length.&gt;&gt;     }     class xs:string {         &lt;&lt;Built-in primitive type. The string datatype represents character strings in XML.&gt;&gt;     }     descriptionString &lt; -- xs:string   </pre>	
Type	restriction of xs:string	
Facets	maxLength 400	
Used by	Element program/programDescription	
Source	<pre>&lt;xs:simpleType name="descriptionString"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation&gt;The length of the description text is constraint in length.&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:restriction base="xs:string"&gt;     &lt;xs:maxLength value="400"/&gt;   &lt;/xs:restriction&gt; &lt;/xs:simpleType&gt;</pre>	

## Simple Type lengthUnits

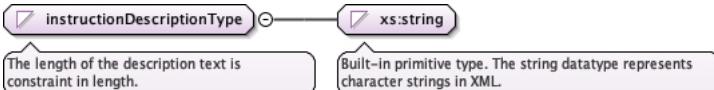

Namespace	<a href="https://github.com/bartneck/swiML">https://github.com/bartneck/swiML</a>									
Annotations	The unit of measurement for the length of the target pool (meter or yards).									
Diagram	<pre> classDiagram     class lengthUnits {         &lt;&lt;The unit of measurement for the length of the target pool (meter or yards).&gt;&gt;     }     class xs:string {         &lt;&lt;Built-in primitive type. ## Complex Type pyramidType

Namespace	https://github.com/bartneck/swiML
Annotations	Pyramids start with short instructions (e.g. 50) and increase to their stop length (e.g. 200). They then decrease back to the start length.
Diagram	<p>The diagram illustrates the structure of the <code>pyramidType</code> complex type. It starts with a general note: "Pyramids start with short instructions (e.g. 50) and increase to their stop length (e.g. 200). They then decrease back..." This leads to the <code>pyramidType</code> element, which contains the following fields:</p> <ul style="list-style-type: none"> <li><code>startLength</code> (Type: <code>lengthType</code>): The start length of the pyramid.</li> <li><code>stopLength</code> (Type: <code>lengthType</code>): The stop length of the pyramid. This is the highest point of the pyramid.</li> <li><code>increment</code> (Type: <code>xs:nonNegativeInteger</code>): The increment at which the pyramid increases. This defines the slope.</li> <li><code>incrementLengthUnit</code> (Type: <code>lengthUnits</code>): A pointy pyramid swims the stop length only once. A non-pointy pyramid swims the stop length twice.</li> <li><code>isPointy</code> (Type: <code>xs:boolean</code>): A pointy pyramid swims the stop length only once. A non-pointy pyramid swims the stop length twice.</li> </ul> <p>Below this, there is a section for <code>instructionGroup</code>, which contains the following fields:</p> <ul style="list-style-type: none"> <li><code>length</code> (Type: <code>lengthType</code>): The length of the instruction.</li> <li><code>stroke</code> (Type: <code>strokeType</code>): The stroke to swim. This includes basic strokes, kicking and drills.</li> <li><code>rest</code> (Type: <code>restType</code>): The rest period after the instruction.</li> <li><code>intensity</code> (Type: <code>intensityProfile</code>): The intensity at which to swim the instruction.</li> <li><code>breath</code> (Type: <code>xs:nonNegativeInteger</code>): Number of arm strokes per breath.</li> <li><code>underwater</code> (Type: <code>xs:boolean</code>): True if swimming under water.</li> <li><code>equipment</code> (Type: <code>equipmentType</code>): Equipment to be used, such as board or pads.</li> <li><code>instructionDescription</code> (Type: <code>instructionDescriptionType</code>): Short description to modify the instruction.</li> </ul>
Used by	Element instructionType/pyramid
